Miao Li

State Key Laboratory of Computer Science, Institute of Software, Chinese Academy of Sciences, Beijing, China

(+86) 188-1070-7818 miaoli.cs@gmail.com https://oaimli.github.io

ACADEMIC BACKGROUND

M.S. candidate in Institute of Software, Chinese Academy of Sciences (ISCAS), also affiliated with School of Computer Science and Technology, University of Chinese Academy of Sciences (UCAS) — Aug. 2017 - PRESENT
Exam-exempted postgraduate, Ranking 6/102, GPA **88.31/100**

B.S. in School of Software Engineering, Northeastern University (NEU) — Sep. 2013 - Jul. 2017
Ranking 11/272, GPA **87.35/100**, CET-4 524, CET-6 503

RESEARCH INTRERESTS

- Text generation and document-level understanding
- Deep Unsupervised learning and deep generative models for Natural Language Processing
- Knowledge guided Natural Language Processing
- Model transparency, interpretability, and controllability

TECHNICAL SKILLS

- Skilled programming in Python, Java, and LaTeX, also familiar with Linux
- Proficient in deep learning programming, especially in Keras and Tensorflow, and programming tool boxes (e.g. Numpy, Scipy, Scikit-learn, NLTK)
- Master at most Machine Learning Models (e.g. SVM, LDA, CRF) and inference methods (e.g. Variational Inference and Monte Carlo Method)
- Understand Deep learning well, such as CNN, RNN and high-level deep generative models, especially Variational Auto-Encoder
- Familiar with fundamental tasks and models of Natural Language Processing, like text modeling, information extraction, text generation, etc.

RESEARCH EXPERIENCE

Deep latent-variable models for text clustering — Beijing, Apr. 2018 - PRESENT

Granted by National Key R&D Program of China (No. 2017YFC0803300)

- Combining feature extraction of deep learning and interpretability of the graphical model, deep latent-variable models are suitable to text modeling and unsupervised learning tasks.
- We have already proposed a new text clustering model in neural variational inference in Vector Space Model, and our model outperforms state-of-the-art models. Also, clustering results were visualized and interpretable by text topics.
- We are now incorporating knowledge into deep latent-variable models and developing an end-to-end text clustering model in implicit representation of texts.

Topic augmented text generation — Beijing, Nov. 2018 – May. 2019

Supported by National Key R&D Program of China (No. 2017YFC0803300)

- We proposed a text generation model that learns semantics and structural features simultaneously, which captures structural features by a sequential variational autoencoder component and leverages a topic modeling component based on Gaussian distribution to enhance the recognition of text semantics.
- Results of our experiments over several datasets demonstrate that our model outperforms several state-of-the-art models in terms of perplexity and topic coherence. Also, the latent representations learned by our model can be used in down-stream tasks and is superior in text classification.

Clustering volume trajectories of buses in Beijing — Beijing, Oct. 2016 – Dec. 2017

A joint work with Beijing Public Transport Group

- We proposed a three-phase clustering strategy for the massive trajectories in the form of Origin-Destination pairs which were modeled as a sparse graph where the spatial and temporal features as well as the constraints of road networks are integrated into the similarity of trajectories.
- This work demonstrated the impact of trajectory clustering on evaluating and adjusting public transit operations and methods we developed are in practical use in Beijing Public Transport Group.

A series of Android development Shenyang, Dec. 2013 – Sep. 2016

As the Manager or developer in charge

- Team management Android system, Diagnostic system for wind power generators in Android, and Pingnan Medical System for communities in Android. I was the major developer of these three Android clients and also in charge of their design.
- Developed many new Android modules (e.g. user-defined muti-picture widget with disk and memory cache, PDF browser without calling other softwares) and achieved most hard features in these Apps (dynamic view in a tree structure and offline searching).

PUBLICATIONS

- (EMNLP 2019 Accepted, Top-tier conference in NLP) A Topic Augmented Text Generation Model: Joint Learning of Semantics and Structural features
- (ICTAI 2019 Accepted) A New Effective Neural Variational Model with Mixture-of-Gaussians Prior for Text Clustering
- (UIC 2018) Clustering Large-Scale Origin-Destination Pairs: A Case Study for Public Transit in Beijing

HONORS & AWARDS

- Chinese National Scholarship for Postgraduates (<Top 3% in ISCAS) Nov. 2018
- The First Prize Scholarship of UCAS (<Top 10%) Oct. 2017&2018
- Excellent Student Cadre of University of Chinese Academy of Sciences, twice Jun. 2018&2019
- Merit Student of University of Chinese Academy of Sciences, twice Jun. 2018&2019
- Outstanding Graduate of Northeastern University June. 2017
- Outstanding graduate thesis Award of Northeastern University (Top 1/272) Jul. 2017
- First prize scholarship of Northeastern University, twice Sep. 2015&2016
- Chinese National Encouragement Scholarship, twice Oct. 2015&2016
- Excellent Student Cadre of Northeastern University, twice Oct. 2015&2016
- Merit Student of Northeastern University, three times Oct. 2014-2016

Competitions

- ZhejiangLab Cup Global Artificial Intelligence Competition 2018: Zero-shot Learning Picture Recognition, Ranking 80/3224 Sep. 2018
- Honorable Mention in MCM/ICM 2015 Mar. 2015
- First prize in the "Oracle Cup" Java programming contest in Northeast of China Oct. 2014

OTHER EXPERIENCE

- Graduate Student Council Chairman of ISCAS Sep. 2018 - PRESENT
- Monitor of Class 7 in School of Computer Science in UCAS Sep. 2017 - PRESENT
- Undersecretary of Northeastern University Volunteers Association Nov. 2013 – Nov. 2014
- Volunteer in The 12th Chinese National Game Sep. 2013
